Date: \_\_\_\_\_

Topic Title:

**Oral Presentation Evaluation Form**

*Present on a topic of your choosing to your attending and/or treatment team or other audience. Topics can be anything related to the mental health including basic pathophysiology, therapy, epidemiology and/or sociocultural issues and should cite literature or other references.*

*It is highly recommended that you narrow your topic! Do not review general approaches to treating major disorders (e.g., pharmacologic approaches to treating MDD) but rather limit yourself to a more restricted question (e.g., what is the evidence that lithium can be used to augment antidepressants in MDD). It is expected this will be at least 15 minutes long. You may prepare a handout or a slide set, but this is not absolutely required. There is no formal evaluation form for the presentation.*
